Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Sakurai et al (US 4,530,081).

Claim 4, Sakurai et al shows a driving mechanism in Figs. 6 and 7 and column 5, lines 1-32 having an instrument body formed with inserting slot for inserting a recording medium into the instrument body, the driving mechanism moving a second operation unit 4 between a first position (Fig. 6) for covering the recording medium inserting slot and a second position (Fig. 7) for exposing the recording medium inserting slot, the driving mechanism including a second supporting member 5 for supporting the second operation unit, second turnable supporting member 206 turnably fitted to electronic instrument body for supporting the second operation unit, a second drive device 210 for turning the second turnable supporting member, the

second drive device supporting the second supporting member 5 movably directions along which the recording medium is inserted and removed, wherein the second drive device moves the second supporting member and turns the second turnable supporting member to move the second operation unit between the first position and the second position.

Allowable Subject Matter

4. Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

- As the closest reference, Sakurai et al (US 4,530,081) shows a driving mechanism having: a second operation unit, a second supporting member, a second turnable supporting member, and a second drive device for turning the second turnable supporting member, the second drive device supporting the second supporting member movably directions along which the recording medium is inserted and removed, wherein the second drive device moves the second supporting member and turns the second turnable supporting member to move the second operation unit between the first position and the second position. Ishihara (US 6,212,147) further shows a driving mechanism including a gear with a groove in Fig. 26. **None of prior art on record shows** a driving mechanism having a second projecting piece projecting from the second supporting member, third projecting piece projecting from the second turnable

supporting member, gear turned by a drive motor, the gear formed with a **second groove and a third groove**, second guide hole through which the second projecting piece passes received in the second groove, and such that the second projecting piece third guide hole through which the third projecting piece passes such that the third received projecting piece the third groove, wherein the gear turns so that the second groove moves the second projecting piece along the second guide hole and the third groove moves the third projecting piece along the third guide hole to move the second operation unit between the first position and the second position.

- Applicant asserts that the object of the invention is to provide of an instrument, which can reduce the number of parts and in manufacturing cost (Specification, p. 4, lines 23-25).

Conclusion

5. The prior art made of record in PTO-892 Form and not relied upon is considered pertinent to applicant's disclosure.
